Lymstone Lofts is a commercial and residential building located in Williamsville, NY. 60,000 square feet in size, it is home to 20 upscale apartments and four retail spaces including The Woodhouse Day Spa and Lloyd Taco Factory.

A total of four Trace-Lite LED round bollards were installed near the entrance to the building along the perimeter of the sidewalk: ELB-42-S-VS-3K-BL. The placement of the fixtures allow for sufficient illumination of the space at night while creating a physical barrier between the walkway and the parking lot.

The ELB traditional louvered bollard utilizes long life LED technology to deliver uniform illumination, superior spacing and low glare due to its highly engineered optical design. The ELB offers durable extruded aluminum housing coated with a UV-resistant powder finish to protect against the elements. It comes standard with a 10kV surge protector and is secured with tamper-proof hardware. The LED engine is designed to deliver over 966 lumens and is available with UL924 emergency egress.

This bollard is built to last and includes a five year warranty. It is also offered in a High Abuse configuration built with a reinforced internal structure to withstand maximum abuse.

"Trace-Lite's quality, lead time and ease of installation was pertinent in making the decision to install Trace-Lite's ELB series LED bollard," said Michael Geyer, Specification Sales at Vertex Solutions.
